

Record installation revenue offsets decreased series production in 2012. New CGI product development and product launches provide opportunities for new installations and increased series production.

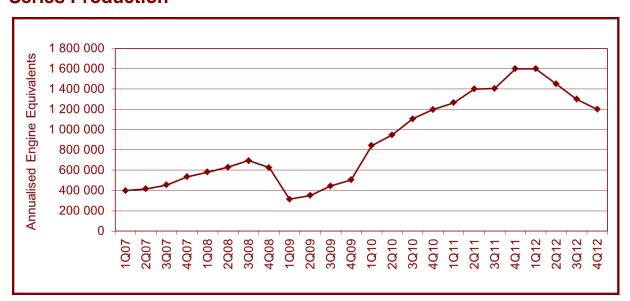

Fourth Quarter 2012

- Revenue for Period: SEK 14.4 million (SEK 16.0 million)
- Operating Result: SEK 2.0 million (SEK 4.1 million)
- Earnings per Share: SEK -0.5 per share (SEK 0.7)
- Cashflow from Operations: SEK 1.8 million (SEK 4.6 million)
- Average Annualised Production during the Period*: 1.20 million Engine Equivalents (1.62 million)
- Record installation revenue of SEK 9.0 million in 2012
- New order received for commercial vehicle series production installation
- Pre-production underway for first high-volume petrol engine, with series production starting in 2013
- Breakthrough in US light duty pick-up market as SinterCast-CGI V6 diesel confirmed for Ram 1500

Full Year 2012

- Revenue: SEK 45.9 million (SEK 49.0 million)
- Operating Result: SEK 1.0 million (SEK 11.6 million)
- Earnings per Share: SEK -0.5 per share (SEK 2.1)
- Cashflow from Operations: SEK 1.3 million (SEK 14.5 million)
- **Dividend:** Proposed ordinary dividend of SEK 1.0 per share (SEK 1.0)
- Installed Base: 20 fully automated systems and 13 Mini-Systems in Europe, Asia and the Americas

Series Production*

Series production declined to 1.2 million Engine Equivalents during the fourth quarter, primarily due to decreased commercial vehicle volumes in Europe and the Americas. Foundry production of the Navistar 13 Litre cylinder block, interrupted during the second half of 2012, has resumed, providing an increase in the annualised volume in January.

^{*} Annualised average production of Engine Equivalents during the quarter (1 Engine Equivalent = 50 Kg)

CEO Comments

Production affected by commercial vehicle demand; V-diesels remain strong

Annualised series production during the quarter was 1.20 million Engine Equivalents, which represents a decline of approximately 8% relative to the third quarter of 2012. Much of the decline continues to be attributed to the interrupted shipment of the Navistar Big Bore commercial vehicle cylinder block in North America, and to reduced commercial vehicle demand in Europe. However, foundry production of the Navistar 13 Litre cylinder block resumed at both the Tupy foundry in Brazil and the Pure Power foundry in the USA during January, providing an overall increase in annualised series production for the first month of 2013. Sales of the Navistar MaxxForceTM 13 engine are expected to resume during March 2013. The near-term production outlook continues to be linked to the recovery of commercial vehicle production and the launch of new CGI engines.

Series production of high volume passenger vehicle V-diesel engines continued at a strong pace throughout the quarter, with stable contributions from the Audi and Ford engines and increased production of the VM Motori 3.0 Litre V6 engine. The VM Motori engine was launched in the Jeep Grand Cherokee at the North American International Auto Show in Detroit on 14 January. Thereafter, on 14 February, Ram Trucks announced the application of the engine in the Ram 1500, providing a breakthrough for diesel and SinterCast in the high volume US light duty pick-up sector. The diesel Grand Cherokee will be available in US dealer showrooms during the second quarter of 2013 while the Ram 1500 is scheduled to begin sales during the third quarter of 2013. The engine was introduced in North America following successful debuts in the Jeep Grand Cherokee, Chrysler 300 and Lancia Thema in Europe. VM Motori is an Italian specialist diesel engine manufacturer, jointly owned by Fiat and General Motors. Increased volumes of the VM Motori V6 are expected as the Grand Cherokee and Ram 1500 sales begin, and as the engine is applied to additional vehicles within the Fiat/Chrysler group.

Despite the wider economic uncertainty, new CGI series production commitments were secured during the period and new product development programmes have been initiated in Europe, Asia and the Americas. The increased CGI product development activities provided the foundation for record installation revenues during 2012 as foundries prepared for the series production planning of their customers. The installation outlook remains positive and SinterCast announced its first series production installation of 2013 on 11 February. The installation, ordered by an undisclosed major European commercial vehicle OEM, is scheduled to be shipped and commissioned during the second half of February. Pre-production began during 2012 with on-site engineering support.

The commissioning of SinterCast's most comprehensive installation to date, at the Tupy foundry in Saltillo, Mexico, is planned for March 2013. The installation is designed to support the production of a new passenger vehicle cylinder block with a planned mature volume of more than 300,000 blocks per year, potentially the highest volume CGI engine in the world. In parallel with the installation of the new System 3000 *Plus*, the existing SinterCast equipment on the passenger vehicle production line at the Saltillo foundry will be moved to the commercial vehicle production line to support ongoing product development for heavy duty engine applications.

SinterCast continues to support product development programmes for passenger vehicle, commercial vehicle and industrial power applications in Europe, Asia and the Americas. This development includes SinterCast's first high volume CGI petrol engine commitment, which remains on schedule for the start of

series production during 2013. Pre-production of the petrol engine began during January. It is estimated that the combined potential of the current series production programmes and the programmes currently under development represents a market opportunity of approximately 4.65 million Engine Equivalents per year within SinterCast's five year planning horizon.

Continued progress in new Ductile Iron technology

The development of the ductile iron technology continued throughout the quarter in anticipation of market introduction at the Ductile Iron Society annual meeting in June 2013. The ductile iron technology is expected to provide a cost-benefit by reducing magnesium consumption, improving mould yield and reducing casting defects in the foundry, and by improving machinability. In the lead-up to the market introduction, the development will continue with in-house testing and a planned external case study to further define the technical correlations, the process control applications and the magnitude of the cost-benefit opportunity.

Financial Summary

Revenue

The revenue for the SinterCast Group relates primarily to income from equipment, series production and engineering service.

Revenue Breakdown	October	-December	ecember January	
(Amounts in SEK million if not otherwise stated)	2012	2011	2012	2011
Number of Sampling Cups shipped	21,500	33,100	102,400	138,200
Equipment 1	7.0	4.6	9.0	7.9
Series Production ²	7.2	11.0	35.8	39.0
Engineering Service ³	0.2	0.4	1.0	2.0
Other	0.0	0.0	0.1	0.1
Total	14.4	16.0	45.9	49.0

Notes:

- 1. Includes revenue from system sales and leases and sales of spare parts
- Includes revenue from production fees, consumables and software licence fees
- Includes revenue from technical support, on-site trials and sales of test pieces

The **October-December 2012** revenue amounted to SEK 14.4 million (SEK 16.0 million). Equipment revenue amounted to SEK 7.0 million (SEK 4.6 million), including revenue from the System 3000 *Plus* process control system shipped to the Tupy foundry in Saltillo, Mexico, the Teksid System 3000 refurbishment, and the Mini-System 3000 shipped to an undisclosed Asian foundry. The revenue from series production decreased due to lower Sampling Cup shipments and reduced series production, primarily related to the Navistar Big Bore commercial vehicle cylinder block in North America and to lower commercial vehicle demand in Europe.

The **January-December 2012** revenue amounted to SEK 45.9 million (SEK 49.0 million). The revenue decrease is a result of lower series production and a reduction in Sampling Cup shipments, as predicted at the 2012 AGM, primarily due to reduced demand for exhaust components produced for passenger vehicles in Europe. A new record for revenue from Equipment, SEK 9.0 million (SEK 7.9 million) was established in 2012.

Results

The business activities of SinterCast are best reflected by the Operating Result. This is because the "Result for the period after tax" and the "Earnings per Share" are influenced by the financial income and costs and by the revaluation of tax assets.

Results Summary	October-D	ctober-December Januar		
(Amounts in SEK million if not otherwise stated)	2012	2011	2012	2011
Operating Result	2.0	4.1	1.0	11.6
Result for the period after tax	-3.6	4.8	-3.7	14.5
Earnings per Share (SEK)	-0.5	0.7	-0.5	2.1

The **October-December 2012** Operating Result of SEK 2.0 million (SEK 4.1 million), decreased as a result of lower gross results of SEK 1.6 million, higher operational expenses of SEK 0.9 million and improved other operating income of SEK 0.4 million. The lower gross result is due to lower revenue and changes in product mix, with a higher proportion of the 2012 revenue being derived from Equipment revenue rather than series production.

The Result for the period after tax amounted to SEK -3.6 million (SEK 4.8 million), primarily related to the revaluation of the deferred tax asset, as described in the section entitled "Deferred Tax Asset".

The **January-December 2012** Operating Result of SEK 1.0 million (SEK 11.6 million), decreased as a result of lower gross results of SEK 2.6 million, higher operational expenses of SEK 6.3 million, and reduced operational exchange gains in the amount of SEK 1.7 million, reported as other operating income. The higher operational expenses are related to recruiting and salary expenses incurred in order to position the Company for further growth, as outlined at the 2012 AGM.

The Result after tax for January-December 2012 amounted to SEK -3.7 million (SEK 14.5 million), decreased as a result of lower Operating Results of SEK 10.6 million and the improved Financial Result of SEK 1.5 million. The remaining difference of SEK 9.1 million is primarily related to revaluation of the deferred tax asset, as described in the section entitled "Deferred Tax Asset". The tax expenses refer mainly to business and income tax paid in China.

Deferred Tax Asset

Tax amounted to SEK -5.7 million (SEK 3.4 million) during the period, of which SEK -5.4 million was due to the change in the Swedish corporate tax rate from 26.3% to 22%. SEK -0.3 million was due to tax paid in China.

The estimated future taxable profit and deferred tax asset calculation is reassessed every quarter. As of 31 December 2012, SEK 125.1 million (SEK 125.1 million) of SinterCast's total carried-forward tax losses have been used as the basis of the updated calculation, resulting in SEK 27.5 million (SEK 32.9 million) being capitalised as a deferred tax asset. The deferred tax asset is included in the financial assets in the balance sheet.

Employee Stock Option Program

As of 31 December 2012, the total cost of the employee stock option program 2009-2013 was calculated at SEK 2.9 million (SEK 3.3 million), based on a closing share price of SEK 43.8 (SEK 45.0). During 2012, SEK 0.4 million (SEK 0.7 million) was accounted for as costs related to the option program.

Cashflow, Liquidity and Investments

Cashflow Summary	October-D	December	January	-December
(Amounts in SEK million if not otherwise stated)	2012	2011	2012	2011
Cashflow from operations	1.8	4.6	1.3	14.5
Cashflow from investment activities	-1.4	-0.1	-1.6	-0.4
Cashflow from financing activities	-	-0.3	-11.9	-6.8
Cashflow total	0.4	4.2	-12.2	7.3
Liquidity	35.4	47.6	35.4	47.6

The **October-December 2012** cashflow from operations was SEK 1.8 million (SEK 4.6 million). The positive cashflow from operations during the period is primarily explained by the positive Operating Result. Investments, primarily related to new production tooling, reduced the cashflow by SEK 1.4 million during the period. The total cashflow amounted to SEK 0.4 million (SEK 4.2 million).

The **January-December 2012** cashflow from operations was SEK 1.3 million (SEK 14.5 million). The lower cashflow result during the period, compared to 2011, is primarily explained by reduced Operating Result and increased working capital during 2012, including paid out accrued expenses of a one-time character.

Cashflow from financial activities amounted to SEK 11.9 million (SEK 6.8 million), following the payment of the dividend to shareholders in the amount of SEK 11.9 million (SEK 3.5 million). The total cashflow result for the period was SEK -12.2 million (SEK 7.3 million), resulting in SEK 35.4 million (SEK 47.6 million) in liquidity on 31 December 2012.

Investments amounted to SEK 2.0 million (SEK 1.0 million) during the period, of which SEK 1.6 million (SEK 0.4 million) was paid out as cashflow during the year. Investments include new production tooling, capitalised process control equipment, computer equipment and capitalised patent expenses.

Risks and Uncertainty Factors

The main uncertainty factor for SinterCast continues to be the overall timing of the CGI market ramp-up. This primarily depends on OEM decisions for new CGI products, the global economy for new vehicle sales, and the individual sales success of vehicles equipped with SinterCast-CGI components. The global economy has recently become more uncertain and this has begun to influence consumer confidence and automotive sales. SinterCast's diversification between V-diesel engines for passenger vehicles, commercial vehicle engine components, and other applications such as exhaust components and industrial power engines, combined with its presence in Europe, Asia and the Americas, reduces the dependence on individual product applications and geographical regions.

SinterCast enjoys global brand recognition and respect as the CGI technology leader and is welcomed by the industry as a reliable and trustworthy partner. However, virtually every company encounters competition,

and SinterCast is no exception. SinterCast judges that its technology and engineering know-how provides the most reliable and cost-effective solution for series production of high quality CGI.

New powertrain technologies, such as vehicle electrification (hybrid and plug-in vehicles) and fuel cells attract significant media attention; however, the development and implementation of these technologies remain a long-term prospect and SinterCast does not expect these technologies to have a significant effect on the Company's competitive position for the foreseeable future.

For full risk and uncertainty factor information, please see note 26 on p.39 in SinterCast's Annual Report 2011

Organisation

With successful high volume CGI production in foundries located in Europe, Asia and the Americas, SinterCast has established a global organisation with employees and representatives in Sweden, the United Kingdom, the United States, China, Korea, Japan, India and Australia. During the second quarter of 2012, a new subsidiary was established in Korea and during the fourth quarter of 2012, the establishment of the Chinese subsidiary was completed. As of 31 December 2012, the Group had 19 (17) employees, three (three) of whom were female. The Company is well positioned to support global market activities and to drive SinterCast's future growth.

Parent Company

SinterCast AB (publ) is the Parent Company of the SinterCast Group, with its registered office located in Stockholm, Sweden. The Parent Company has 15 (14) employees. The majority of the operations are managed by the Parent Company, including responsibility for the representative office in China and sales representatives in Australia, India and Japan. Operations in the UK, USA and Korea are managed by the local companies. The information given for the Group in this report corresponds in all material respects to the Parent Company.

Patents

SinterCast currently holds 11 (11) patents and maintains 43 (53) individual national phase patents granted or pending worldwide. The 11 base patents address SinterCast's metallurgical technology, the Sampling Cup, product applications and machining.

Accounting Principles

The information provided on behalf of the Group in this interim report has been prepared in accordance with Sweden's Annual Accounts Act and IAS 34 Interim Financial Reporting. The reporting for the Parent Company has been prepared in accordance with Sweden's Annual Accounts Act and RFR 2. The accounting policies that have been applied for the Group and for the Parent Company are in agreement with the accounting policies used in the preparation of the Company's latest annual report.

No material transactions have taken place between SinterCast and the Board or the Management during the period.

Events after the Balance Sheet Date

The following press releases have been issued since the balance sheet date of 31 December 2012.

11 February 2013: SinterCast secures new order for commercial vehicle series production installation
18 February 2013: Breakthrough for SinterCast: First diesel engine for US light duty pick-up trucks

There have been no other significant events since the balance sheet date of 31 December 2012 that could materially change these financial statements.

Nomination Committee

The Nomination Committee, elected by the Annual General Meeting 2012, consists of Karl-Arne Henriksson, Chairman, Ulla-Britt Fräjdin-Hellqvist and Torbjörn Nordberg. The Nomination Committee can be contacted at: nomination.committee@sintercast.com

Annual General Meeting

The Annual General Meeting 2013 of SinterCast AB (publ) will be held on Wednesday 15 May 2013.

Shareholders wishing to have a matter considered at the Annual General Meeting should submit their proposals in writing to agm.registration@sintercast.com or to the Company: SinterCast AB (publ), P.O. Box 10203, SE-100 55 Stockholm, Sweden, at least seven weeks prior to the Annual General Meeting for the proposal to be included in the notice to the meeting. Further details on how and when to register will be published in advance of the Annual General Meeting.

Dividend

The Annual General Meeting of SinterCast AB (publ) held on 24 May 2012 approved an ordinary dividend for 2012 amounting to SEK 1.0 per share and an extraordinary dividend amounting to SEK 0.7 per share. A total amount of SEK 11.9 million was transferred to the shareholders.

Proposed Dividend

The Board's intention is to continue to provide an ordinary dividend to the shareholders, based primarily on the cashflow from operations. In the event that the Board considers that the liquidity exceeds the amount needed to support the operational requirements and strategic objectives, the Board has the option to propose an extraordinary dividend or a share buy-back to further adjust the liquidity.

The Board of Directors propose an ordinary dividend of SEK 1.0 per share (SEK 1.0), representing a transfer of SEK 7.0 million (SEK 7.0 million) to the shareholders of SinterCast AB (publ). An extraordinary dividend in the amount of SEK 0.7 per share was also paid in 2012, resulting in a total transfer of SEK 11.9 million to the shareholders in 2012. The Board proposes 20 May, 2013 as the record date for entitlement to receive dividends. In deciding the amount of the ordinary dividend to be proposed to the AGM 2013, the Board considered cashflow from operations, the financial position, investment requirements and other factors, such as market outlook, growth strategy and the internal financial forecast for the Company and for the Group.

Information

The Interim Report January-March 2013 will be published on 24 April 2013

The Interim Report April-June 2013 will be published on 21 August 2013

The Interim Report July-September 2013 will be published on 6 November 2013

The Interim Report October-December and Full Year Results 2013 will be published on 26 February 2014

Annual Report 2012

The Annual Report 2012 will be published on 5 April 2013.

This report has not been reviewed by the Company's Auditors.

SinterCast is the world's leading supplier of process control technology for the reliable high volume production of Compacted Graphite Iron (CGI). With at least 75% higher tensile strength, 45% higher stiffness and approximately double the fatigue strength of conventional grey cast iron and aluminium, CGI allows engine designers to improve performance, fuel economy and durability while reducing engine weight, noise and emissions. The SinterCast technology is used for the production of more than 50 CGI components, ranging from 2 kg to 17 tonnes, all using the same proven process control technology. The end-users of SinterCast-CGI components include Aston Martin, Audi, Cameron Compression, Caterpillar, Chrysler, DAF Trucks, Ford, Ford-Otosan, General Electric Transportation Systems, General Motors, Hyundai, Jaguar, Jeep, Kia, Lancia, Land Rover, MAN, Navistar, Porsche, PSA Peugeot-Citroën, Renault, Rolls-Royce Power Engineering, Scania, Toyota, VM Motori, Volkswagen, Volvo and Waukesha Engine. The SinterCast share is quoted on the Small Cap segment of the NASDAQ OMX stock exchange (Stockholmsbörsen: SINT). For more information: www.sintercast.com
